

AK 2075
BLACK CAMOUFLAGE

Many modellers struggle as they have to choose the right color to accentuate the panel lines of an aircraft. We did the research for you and offer you the right color for each scheme, even for difficult tasks like black camouflage.

Accentuating panel lines really brings an aircraft model to life. Especially on black models.

After shaking up the paint, apply on your model straight from the jar.

After 5 till 10 minutes clean the excess paint off with a brush moistened with White Spirit.

This method works fast and easy to use with a perfect result.

Without this special designed Paneliner a black aircraft looks rather dull and uninteresting.

Try to apply this product as accurate as possible in the panel lines.

When the excess paint is removed your panel lines will look the part! Easy and straight forward.

We recommend you apply the Paneliner first before taking further steps in the weathering process of your airplane model. You can repeat the process as much as you want until you are satisfied with the results.
